MEASUREMENTS - MARGIN: ± 0.02mm

The gemological analysis of diamonds, precious stones and other minerals must be carried out by gemologists with many years experience in this field who have a keen sense of the professional code of ethics governing their work as well as a thorough knowledge of crystallographic, optical and physical phenomena.

The identification of the various species and varieties of stones, the distinction between natural and synthetic material, as well as various treatment methods currently encountered are all very sensitive factors. More specifically for diamonds, the laws of refraction and dispersion of light, the related geometric data, as well as knowledge of all aspects involved in the cutting process are essential.

This gemological report is provided upon request of the customer and/or the owner of the gem. By making this report IGI does not agree to purchase or replace the article. Neither IGI nor any member of its staff shall, at any time, be held responsible for any discrepancy which may result from the application of other grading methods. Neither the client nor any purchaser of the gem shall regard this Report as an appraisal nor as a guaranty or warranty.

This report is subject to the terms and conditions set forth above and on reverse.

certificate no. 20033724503

The HRD Certificates Department is BELTEST accredited for the quality examination of polished diamonds under ref. N° 047.

This certificate is established in conformity with the "International Rules for Grading Polished Diamonds", approved by the World Federation of Diamond Bourses and the International Diamond Manufacturers Association at the May 1978 Congress (rev. ed. 1995), and may not be reproduced by any means whatsoever unless complete.

identification marks:

Red symbols refer to internal and green symbols to external characteristics. The symbols do not usually reflect the actual size of the characteristics. The characteristics have been indicated in order to clarify the description and/or for further identification.

The stone in accordance with the above mentioned number has been identified as a natural gem diamond and has the following description:

shape oval
weight 3.05 ct
clarity grade vs2
fluorescence slight
colour grade rare white (G)
measurements 12.19 x 7.93 x 4.88mm
proportions
girdle medium 4% faceted
culet pointed
table width 61%
cr. height 15%
pav. depth 42.5%
finish grade very good
comments

antwerpen, 12/05/2003

gemmologists

The characteristics of the above mentioned diamond have been established by scientific measurements and observations, carried out in the laboratory of the Diamond High Council.
